## OVERVIEW

Designed for enterprise performance and scalability, the Cisco® UCS B420 M3 Blade Server combines the advantage of 4-socket computing with the cost-effective latest Intel® Xeon® E5-4600 v2 and E5-4600 series processor family CPUs, for demanding virtualization and database workloads.

With industry-leading compute density, I/O bandwidth and memory footprint, the UCS B420 M3 is a balanced, high-performance platform that complements the UCS blade server portfolio. The full-width UCS B420 M3 supports 1.5 TB of memory and leverages UCS VIC technology for up to 160 Gb aggregate I/O bandwidth.

The UCS B420 M3 is part of the Cisco Unified Computing System (UCS) that combines blade and rack servers with networking and storage access into a single unified system. Centrally configured through unified, model-based management, Cisco UCS simplifies and speeds deployment of enterprise-class applications running in bare-metal, virtualized and cloud-computing environments.

Notes

- For information about the KVM local I/O cable that plugs into the console connector (a cable is included with every Cisco UCS 5100 Series blade server chassis accessory kit), see [CHOOSE LOCAL KVM I/O CABLE\\* \(OPTIONAL\) on page 35](#).

## BASE SERVER STANDARD CAPABILITIES and FEATURES

*Table 1* lists the capabilities and features of the base server. Details about how to configure the server for a particular feature or capability (for example, number of processors, disk drives, or amount of memory) are provided in *CONFIGURING the SERVER on page 7*.

**NOTE:** The B420 M3 blade server requires UCS Manager (UCSM) to operate as part of the UCS system.

- The B420 M3 with E5-4600 CPUs requires UCSM 2.0 (4b) or later
- The B420 M3 with E5-4600 v2 CPUs requires UCSM 2.2 (2c) or later

## CONFIGURING the SERVER

Follow these steps to configure the Cisco UCS B420 M3 Blade Server:

- *STEP 1 VERIFY SERVER SKU, page 8*
- *STEP 2 CHOOSE CPU(S), page 9*
- *STEP 3 CHOOSE MEMORY, page 11*
- *STEP 4 CHOOSE DISK DRIVES (OPTIONAL), page 15*
- *STEP 5 CHOOSE ADAPTERS, page 18*
- *STEP 6 ORDER A TRUSTED PLATFORM MODULE (OPTIONAL), page 22*
- *STEP 7 ORDER CISCO FLEXIBLE FLASH SECURE DIGITAL CARDS, page 23*
- *STEP 8 ORDER INTERNAL USB 2.0 DRIVE (OPTIONAL), page 24*
- *STEP 9 ORDER FLASH-BACKED WRITE CACHE (OPTIONAL), page 25*
- *STEP 10 CHOOSE OPERATING SYSTEM AND VALUE-ADDED SOFTWARE, page 26*
- *STEP 11 CHOOSE OPERATING SYSTEM MEDIA KIT (OPTIONAL), page 29*
- *STEP 12 CHOOSE SERVICE and SUPPORT LEVEL, page 30*
- *STEP 13 CHOOSE LOCAL KVM I/O CABLE\* (OPTIONAL), page 35*

## STEP 1 VERIFY SERVER SKU

Verify the product ID (PID) of the server as shown in [Table 2](#).

Table 2 PID of the Base UCS B420 M3 Blade Server

Product ID (PID)	Description
UCSB-B420-M3	UCS B420 M3 Blade Server with no CPU, memory, HDD, SSD, mLOM, or adapter card

The base Cisco UCS B420 M3 blade server does not include the following components. They must be selected during product ordering:

- CPUs
- Memory
- Disk drives
- Cisco adapters (such as the VIC 1240, VIC 1280, and Port Expander)
- Emulex and QLogic network adapters
- Cisco UCS Storage Accelerators (such as the Fusion-io and LSI Logic adapters)

**NOTE:** Use the steps on the following pages to order servers with the configurable components that you want configured in your servers.

## STEP 2 CHOOSE CPU(S)

The standard CPU features are:

- Intel Xeon processor E5-4600 v2 or E5-4600 series processor family CPUs
- Core counts of up to 12
- Cache sizes of up to 30 MB

### Select CPUs

The supported Intel Xeon E5-4600 v2 and E5-4600 series CPUs on the UCS B420 M3 are listed in [Table 3](#).

Table 3 Supported Intel CPUs: E5-4600 v2 and E5-4600 Series Processor Family CPUs

Product ID (PID)	Intel Number	Clock Freq (GHz)	Power (W)	Cache Size (MB)	Cores	QPI	Highest DDR3 DIMM Clock Support (MHz)

UCS-CPU-E5-4603	E5-4603	2.00	95	10	4	6.4 GT/s	1066

#### Notes

1. When using E5-4600 v2 CPUs, the server must be controlled with UCS Manager (UCSM) version 2.2.

## Supported Configurations

---

### (1) Two-CPU Configuration

- Choose two identical CPUs from any one of the rows of [Table 3](#). CPUs 1 and 2 will be populated.

### (2) Four-CPU Configuration

- Choose four identical CPUs from any one of the rows of [Table 3](#).

## Notes

---

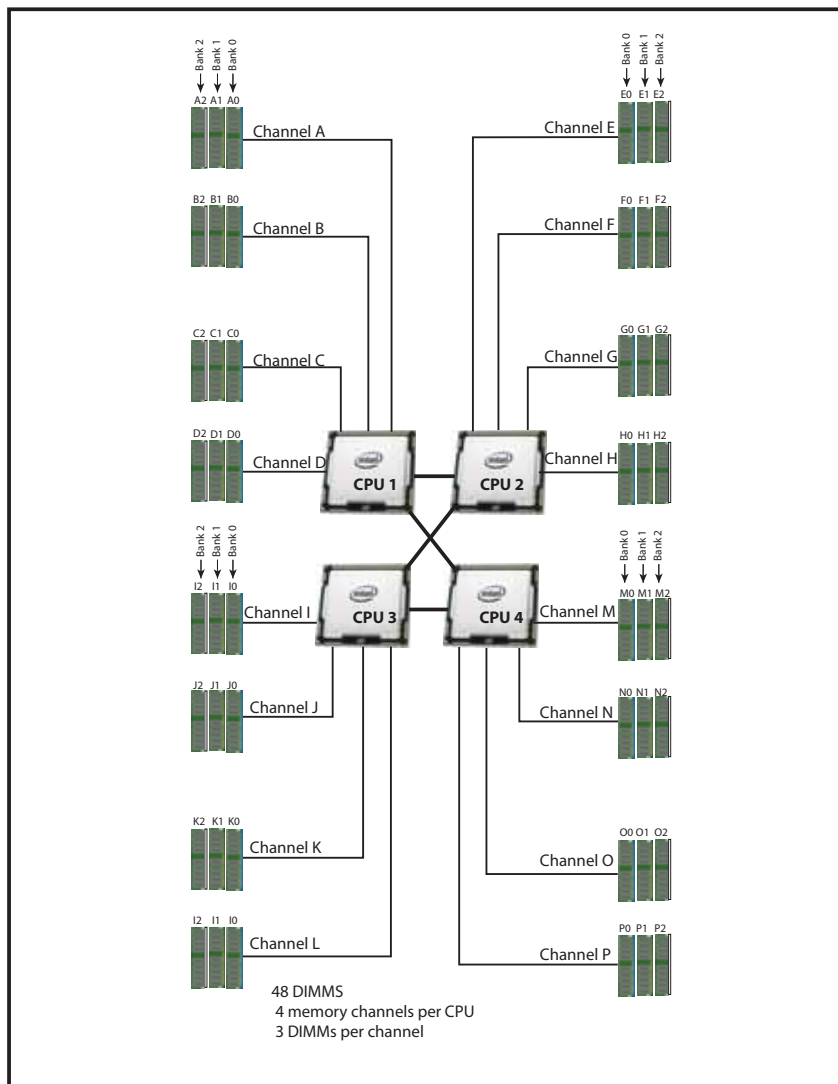

- The system will run at the lowest CPU or DIMM clock speed. For example, when using 1600-MHz DIMMs with an E5-4603 CPU (which can only support up to 1066-MHz DIMMs), the system will run at the lower speed of 1066 MHz.
- System speed is also dependent on how many DIMMs are populated per channel.
- For 2-CPU systems, only 24 DIMM slots are functional (channels A - H). See [Table 10 on page 20](#) for supported adapter combinations in 2-CPU systems.
- For 4-CPU systems, all 48 DIMM slots are functional.

## STEP 3 CHOOSE MEMORY

The standard memory features are:

- DIMMs
  - Clock speed: 1600 MHz
  - Ranks per DIMM: up to 4
  - Operational voltage: dual (1.5 or 1.35 V); default = 1.5 V
  - Registered
- DDR3 ECC registered DIMMs (RDIMMs) or load-reduced DIMMS (LRDIMMS)
- Memory is organized with four memory channels per CPU, with up to three DIMMs per channel (DPC), as shown in [Figure 3](#).

Figure 3 UCS B420 M3 Memory Organization

Choose DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The supported memory DIMMs and the mirroring option are listed in [Table 4](#).

When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two adjacent channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

Table 4 Supported DDR3 DIMMs and Memory Mirroring Option

UCS-MR-1X041RY-A <sup>2</sup>	4GB DDR3-1600-MHz RDIMM PC3-12800/1R/x4/1.35v	1.35/1.5 V	1
<b>Memory Mirroring Option</b>			
N01-MMIRROR	Memory mirroring option		

Notes

1. 1866-MHz DIMMs are only supported with E5-4600 v2 CPUs
2. No longer shipping as of 6/1/2015

Notes

- DIMM configuration rules:
  - The minimum configuration is 1 DIMM per CPU
  - The order in which DIMMs must be installed in a channel is Bank 0 (blue socket), then Bank 1 (black socket), then Bank 2 (white socket).
  - You cannot mix DIMM capacities within a bank
  - You can mix DIMM capacities within a channel

- When mixing different densities of 1600-MHz RDIMMs within a channel, memory will run at 1.5 V (performance mode) only.
  - You cannot mix RDIMMs with LRDIMMs
  - DIMMs default to performance mode (1.5 V). To run DIMMs in power-savings mode (1.35 V), change the server BIOS settings.
- To optimize memory performance:
    - Configure DIMMs identically for each CPU
    - Fill banks equally across the CPU. See DIMM population guidelines in [Table 24](#), [Table 25](#), and [Table 26 on page 40](#).
    - Populate less than 3 DPC
    - Select DIMMs with the highest clock speed for a given processor
  - For systems implementing 3-DPC with E5-4600 series processor family CPUs:
    - Maximum memory speed for 1600-MHz DIMMs is 1333 MHz when using 16 GB DIMMs with E5-4650, E5-4640, or E5-4617 CPUs. Maximum memory speed for all other configurations is 1066 MHz.
    - Memory always runs at 1.5 V regardless if the BIOS setting is low-power mode (1.35 V) or performance mode (1.5 V)
  - For systems shipping with E5-4600 v2 series processor family CPUs, DIMM speeds are as shown in [Table 5](#).

For more information regarding memory, see [DIMM and CPU Layout on page 38](#).

### Supported Configurations

(1) Without memory mirroring:

- Select from 1 to 12 DIMMs per CPU (note that there are 12 DIMM slots per CPU). There must be at least 1 DIMM per CPU.

(2) With memory mirroring:

- Select 4 DIMMs per CPU (installed in bank 0), 8 DIMMs per CPU (installed in banks 0, 1), or 12 DIMMs per CPU (installed in banks 0, 1, 2).

## STEP 4 CHOOSE DISK DRIVES (OPTIONAL)

The UCS B420 M3 can be ordered with or without drives. The B420 M3 provides:

- Four hot plug 2.5" SFF drive bays
- An embedded LSI 2208R RAID controller to provide RAID 0/1/5/10.

NOTE: The UCS B420 M3 blade server meets the external storage target and switch certifications as described in the following link:

<http://www.cisco.com/en/US/docs/switches/datacenter/mds9000/interoperability/matrix/Matrix8.html#wp323852>

### Choose Drives

The supported drives in the UCS B420 M3 are listed in [Table 6](#).

NOTE: 4K format drives are not qualified or supported with B-series UCS servers.

## Supported Configurations

---

- Select 1, 2, 3, or 4 of the drives listed in [Table 6](#).

## Notes

---

- When creating a RAID volume, mixing different capacity drives causes the system to use the lowest-capacity drive.
- Mixing of drive types is supported, but performance may be impacted. RAID volumes should use the same media type.

## STEP 5 CHOOSE ADAPTERS

The adapter offerings are:

- Cisco Virtual Interface Cards (VICs)

Cisco-developed Virtual Interface Cards (VICs) provide flexibility to create multiple NIC and HBA devices. The VICs also support UCS Fabric Extender technologies.

- Converged Network Adapters (CNAs)

Emulex and QLogic Converged Network Adapters (CNAs) consolidate Ethernet and Storage (FC) traffic on the Cisco Unified Fabric.

- Cisco UCS Storage Accelerator Adapters

Cisco UCS Storage Accelerator adapters are designed specifically for the Cisco UCS B-series M3 blade servers and integrate seamlessly to allow improvement in performance and relief of I/O bottlenecks.

*Table 7* shows supported adapter slot configurations.

You must install at least one adapter in one of the three adapter slots. Also see *Network Connectivity on page 43* for more information.

To help ensure that your operating system is compatible with the cards you have selected, please check the Hardware Compatibility List at this URL:

[http://www.cisco.com/en/US/products/ps10477/prod\\_technical\\_reference\\_list.html](http://www.cisco.com/en/US/products/ps10477/prod_technical_reference_list.html)

### Choose an Adapter

## Notes

- Do not mix Fusion io storage accelerator families. That is, do not mix “MP” or “MS” (ioMemory3) with “M” (ioDrive2) family cards.

“Adapter 1,” “Adapter 2,” and “Adapter 3” refer to the UCSM naming convention for the adapter slots (this document uses the UCSM naming convention). In the server BIOS and on the motherboard, the corresponding slots are labeled as “mLOM,” “Mezz 1,” and “Mezz 2,” respectively. See [Table 8](#).

Table 8 Adapter Slot Naming

Notes

1. In the server BIOS and on the motherboard, “Adapter 1,” “Adapter 2,” and “Adapter 3” are labeled as “mLOM,” “Mezz 1,” and “Mezz 2,” respectively
2. The 2104XP fabric extender is not compatible with any network I/O card installed in adapter slot 2. However, a Cisco UCS Storage Accelerator may be installed in adapter slot 3 if it is available.
3. This combination requires that both Storage Accelerators be identical.

## Notes

1. In the server BIOS and on the motherboard, “Adapter 1,” “Adapter 2,” and “Adapter 3” are labeled as “mLOM,” “Mezz 1,” and “Mezz 2,” respectively
2. Only the Port Expander is functional in adapter slot 2 in 2-CPU configurations
3. The 2104XP fabric extender is not compatible with any network I/O card installed in adapter slot 2.

## STEP 6 ORDER A TRUSTED PLATFORM MODULE (OPTIONAL)

Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

The TPM ordering information is listed in [Table 11](#).

Table 11 Trusted Platform Module

Product ID (PID)	PID Description
UCSX-TPM1-001	Trusted Platform Module for UCS

**NOTE:** The module used in this server conforms to TPM v1.2/1.3, as defined by the Trusted Computing Group (TCG).

## STEP 7 ORDER CISCO FLEXIBLE FLASH SECURE DIGITAL CARDS

Dual SDHC flash card sockets are provided on the front left side of the server. Mirroring of two SDHC cards is supported with UCS Manager 2.2x and later.

The SDHC card ordering information is listed in [Table 12](#).

- (1) Select one or two Cisco Flexible Flash secure digital cards

## STEP 8 ORDER INTERNAL USB 2.0 DRIVE (OPTIONAL)

You may order one optional internal USB 2.0 drive. The USB drive ordering information is listed in [Table 13](#).

Table 13 USB 2.0 Drive

Product ID (PID)	PID Description
UCS-USBFLSH-S-4GB	4GB Flash USB Drive (shorter length) for all M3 servers

**NOTE:** A clearance of 0.950 inches (24.1 mm) is required for the USB device to be inserted and removed (see the following figure).

See [Figure 5 on page 36](#) for the location of the USB connector.

**NOTE:** When the Cisco 4GB USB key is purchased with a server, it is pre-installed into the internal USB port and held firmly in place with a clip to protect it from shock and vibration during shipment and transportation. This clip also prevents the USB key from undergoing shock and vibration during ongoing customer operational use.

## STEP 9 ORDER FLASH-BACKED WRITE CACHE (OPTIONAL)

You may order an optional 1 GB flash-backed write cache, which backs up the data written to the RAID controller write cache in the event of a power failure. The flash-backed write cache consists of a 1 GB memory module and a supercapacitor power backup module that connects to the motherboard with a cable. The ordering information is shown in [Table 14](#).

Table 14 Flash-backed Write Cache

Product ID (PID)	PID Description
UCSB-FBWC-1GB	Flash-backed write cache for LSI 2208R RAID controller

The flash-backed write cache provides RAID controller cache protection using NAND flash memory and a supercapacitor. In the event of a power or server failure, cached data is automatically transferred from the RAID controller DRAM write cache to flash. Once power is restored, the data in the NAND flash is copied back into the DRAM write cache until it can be flushed to the disk drives.

For the location of the supercap and the 1 GB memory module, see [Figure 5 on page 36](#).

## STEP 10 CHOOSE OPERATING SYSTEM AND VALUE-ADDED SOFTWARE

## STEP 12 CHOOSE SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

### Unified Computing Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

- Three-year parts coverage.
- Next business day (NBD) onsite parts replacement eight hours a day, five days a week.
- 90-day software warranty on media.
- Ongoing downloads of BIOS, drivers, and firmware updates.
- UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

### SMARTnet for UCS

For support of the entire Unified Computing System, Cisco offers the Cisco SMARTnet for UCS Service. This service provides expert software and hardware support to help sustain performance and high availability of the unified computing environment. Access to Cisco Technical Assistance Center (TAC) is provided around the clock, from anywhere in the world.

For UCS blade servers, there is Smart Call Home, which provides proactive, embedded diagnostics and real-time alerts. For systems that include Unified Computing System Manager, the support service includes downloads of UCSM upgrades. The Cisco SMARTnet for UCS Service includes flexible hardware replacement options, including replacement in as little as two hours. There is also access to Cisco's extensive online technical resources to help maintain optimal efficiency and uptime of the unified computing environment. You can choose a desired service listed in [Table 17](#).

### SMARTnet for UCS Hardware Only Service

For faster parts replacement than is provided with the standard Cisco Unified Computing System warranty, Cisco offers the Cisco SMARTnet for UCS Hardware Only Service. You can choose from two levels of advanced onsite parts replacement coverage in as little as four hours. SMARTnet for UCS Hardware Only Service provides remote access any time to Cisco support professionals who can determine if a return materials authorization (RMA) is required. You can choose a service listed in [Table 18](#).

### Unified Computing Partner Support Service

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise customers. Cisco PSS provides partners with access to Cisco's support infrastructure and assets to help them:

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

Partner Unified Computing Support Options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice.

PSS is available to all Cisco PSS partners, but requires additional specializations and requirements. For additional information, see the following URL:

[www.cisco.com/go/partnerucssupport](http://www.cisco.com/go/partnerucssupport)

The two Partner Unified Computing Support Options include:

- Partner Support Service for UCS
- Partner Support Service for UCS Hardware Only

Partner Support Service for UCS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support.

See [Table 19](#).

### Unified Computing Combined Support Service

Combined Services makes it easier to purchase and manage required services under one contract. SMARTnet services for UCS help increase the availability of your vital data center infrastructure and realize the most value from your unified computing investment. The more benefits you realize from the Cisco Unified Computing System (Cisco UCS), the more important the technology becomes to your business. These services allow you to:

- Optimize the uptime, performance, and efficiency of your UCS
- Protect your vital business applications by rapidly identifying and addressing issues
- Strengthen in-house expertise through knowledge transfer and mentoring
- Improve operational efficiency by allowing UCS experts to augment your internal staff resources
- Enhance business agility by diagnosing potential issues before they affect your operations

You can choose a service listed in [Table 21](#).

#### Unified Computing Drive Retention Service

With the Cisco Unified Computing Drive Retention (UCDR) Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive. In exchange for a Cisco replacement drive, you provide a signed Certificate of Destruction (CoD) confirming that the drive has been removed from the system listed, is no longer in service, and has been destroyed.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The UCDR service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in [Table 22](#).

**NOTE:** Cisco does not offer a certified drive destruction service as part of this service.

## STEP 13 CHOOSE LOCAL KVM I/O CABLE\* (OPTIONAL)

The local KVM I/O cable ships with every UCS 5100 Series blade chassis accessory kit. The cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The local KVM I/O cable ordering information is listed in [Table 23](#).

## DIMM and CPU Layout

Memory is organized as shown in *Figure 6*.

Figure 6 UCS B420 M3 Memory Organization

Each CPU controls four memory channels and 12 DIMM slots, as follows:

- CPU1: Channels A, B, C, and D
  - Bank 0 - A0, B0, C0, and D0 (blue DIMM slots)
  - Bank 1 - A1, B1, C1, and D1 (black DIMM slots)
  - Bank 2 - A2, B2, C2, and D2 (white DIMM slots)
- CPU2: Channels E, F, G, and H
  - Bank 0 - E0, F0, G0, and H0 (blue DIMM slots)
  - Bank 1 - E1, F1, G1, and H1 (black DIMM slots)
  - Bank 2 - E2, F2, G2, and H2 (white DIMM slots)
- CPU3: Channels I, J, K, and L
  - Bank 0 - I0, J0, K0, and L0 (blue DIMM slots)
  - Bank 1 - I1, J1, K1, and L1 (black DIMM slots)
  - Bank 2 - I2, J2, K2, and L2 (white DIMM slots)
- CPU4: Channels M, N, O, and P
  - Bank 0 - M0, N0, O0, and P0 (blue DIMM slots)
  - Bank 1 - M1, N1, O1, and P1 (black DIMM slots)
  - Bank 2 - M2, N2, O2, and P2 (white DIMM slots)

## DIMM Population Order

Populate the DIMMs for a CPU according to [Table 24](#).

A quick reference for the recommended DIMM population order is shown in [Table 25](#) and [Table 26](#). CPU 1 DIMM population order is shown as an example. Pick the number of DIMMs in the table you wish to populate, then, starting with A0, populate down Bank 0, then down Bank 1, then down Bank 2 until you reach the number you picked. If you picked 8 DIMMs, for example, use [Table 25](#) and populate DIMMs in A0, B0, C0, D0, A1, B1, C1, and D1. If you picked 6 DIMMs, for example, use [Table 26](#) and populate DIMMs in A0, B0, C0, A1, B1, and C1, leaving D0 and D1 empty.

## Network Connectivity

This section shows how the supported adapter card configurations for the B420 M3 connect to the Fabric Extender modules in the 5108 blade server chassis.

There are three configurable adapter slots on the B420 M3. One slot supports only the VIC 1240 adapter, and two additional slots accommodate Cisco and Emulex or QLogic adapters, as well as Cisco UCS Storage Accelerator adapters. [Table 9 on page 19](#) and [Table 10 on page 20](#) show supported adapter configurations. You must install at least one adapter in one of the three adapter slots.

“Adapter 1,” “Adapter 2,” and “Adapter 3” refer to the UCSM naming convention for the adapter slots (this document uses the UCSM naming convention). In the server BIOS and on the motherboard, the corresponding slots are labeled as “mLOM,” “Mezz 1,” and “Mezz 2,” respectively. See [Table 8](#).

Table 27 Adapter Slot Naming

Server BIOS and Motherboard Slot Naming	UCSM Slot Naming
mLOM (VIC 1240 only)	Adapter 1
Mezz1	Adapter 2
Mezz2	Adapter 3

Total bandwidth is a function of the Fabric Extender, the adapter, and the adapter slot, as shown in [Table 28](#) and [Table 29](#).

Table 28 Maximum Bandwidth Using Dual Fabric Extenders (FEXs)

FEX Model	Maximum Bandwidth Using Dual FEXs
2208XP	160 Gb
2204XP	80 Gb
2104XP	20 Gb

Table 29 Maximum Bandwidth for Each of the Three Adapter Slots

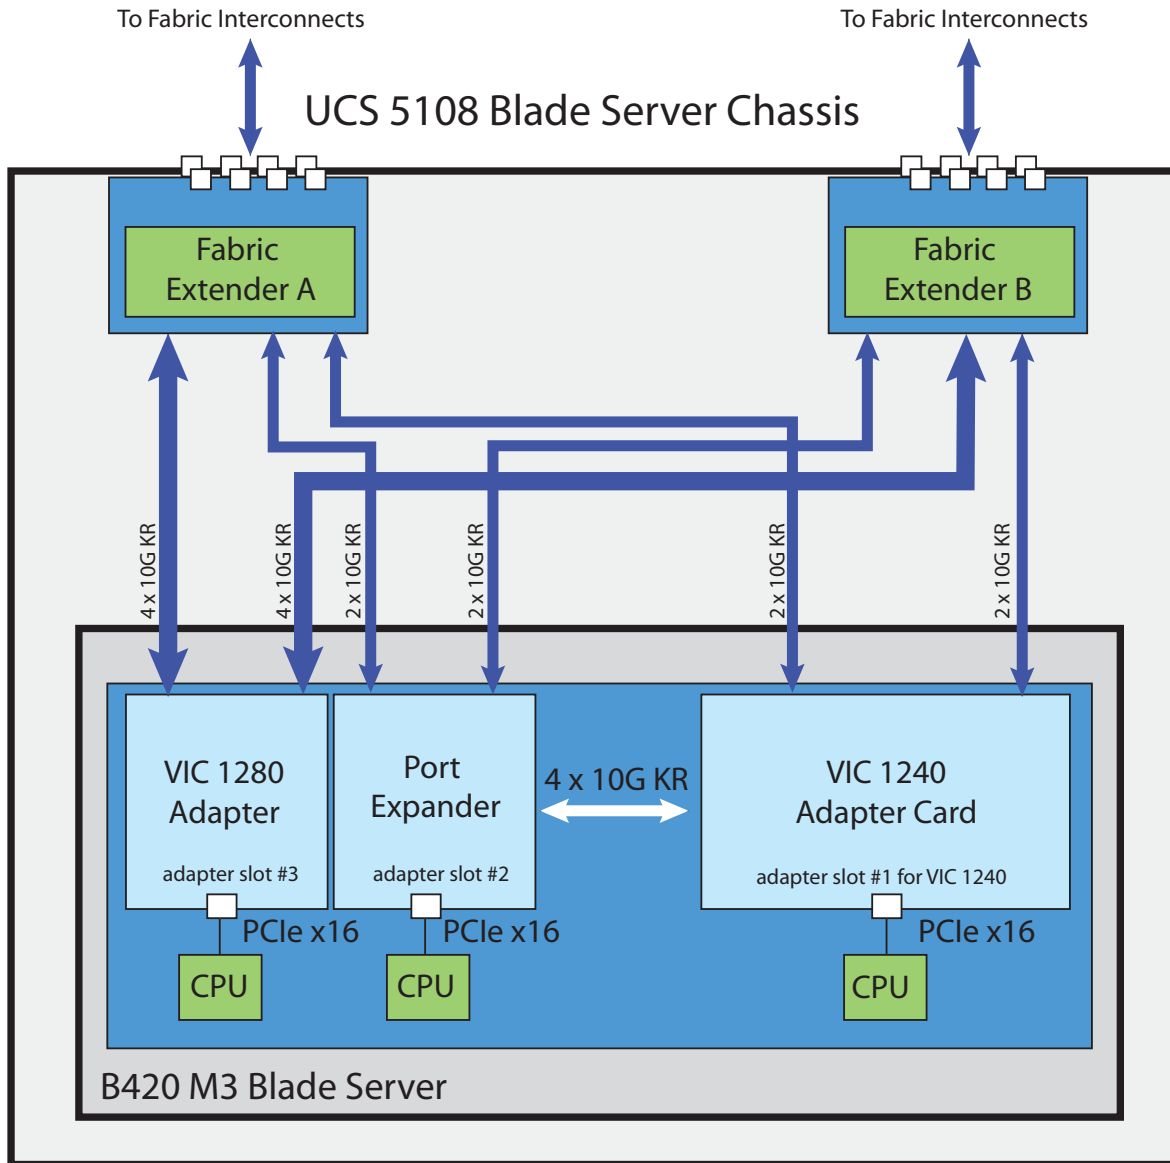

Adapter Slot	Maximum Bandwidth Using Dual FEXs
VIC 1240 (Adapter 1) slot	40 Gb
Adapter 2 Slot	40 Gb
Adapter 3 Slot	80 Gb

Figure 9 shows the configuration for maximum bandwidth, where the following ports are routed to Fabric Extender Modules A and B inside the 5108 blade server chassis:

- Two 2 x 10G KR ports from the VIC 1240 adapter
- Two 2 x 10G KR ports from the Port Expander
- Two 4 x 10G KR ports from the VIC 1280 adapter

The resulting aggregate bandwidth is 160 Gb (80 Gb to each Fabric Extender).

Figure 9 UCS B420 M3 Connections to the Fabric Extenders

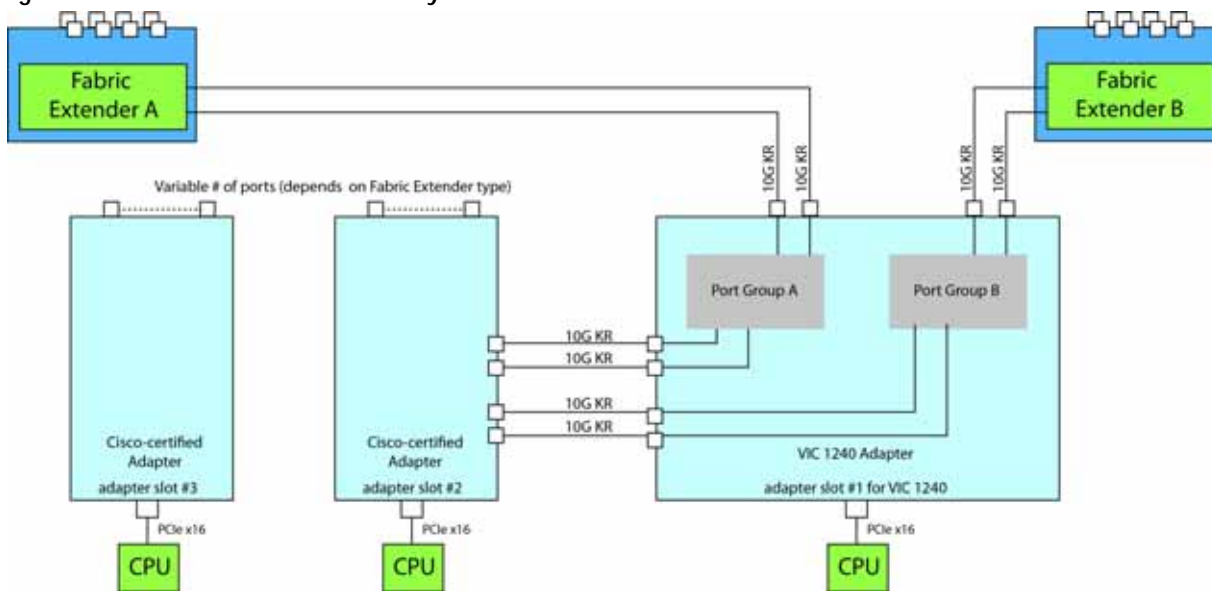

## VIC 1240 and Port Expander

Adapter slot 1 is dedicated to the VIC 1240 adapter, and no other adapter card can be installed in this slot. There are two groups of four ports on the VIC 1240:

- Two ports of the first group and two ports of the second group are wired through the UCS 5108 Blade Server chassis to Fabric Extender A and Fabric Extender B.
- The other two ports of each group are wired to adapter slot 2. The VIC 1240 adapter senses the type of adapter installed in adapter slot 2. If a Port Expander is installed in adapter slot 2, the four 10G KR ports between the adapters are used for port expansion; otherwise they are unused.

With the Port Expander installed, there are up to eight (depending on the Fabric Extender installed) 10 Gb network interfaces, as represented in [Figure 10](#).

Notes

1. In the server BIOS and on the motherboard, “Adapter 1,” “Adapter 2,” and “Adapter 3” are labeled as “mLOM,” “Mezz 1,” and “Mezz 2,” respectively
2. Not all combinations are supported in 2-CPU configurations (see [Table 10 on page 20](#))
3. This combination requires that both Storage Accelerators be identical.

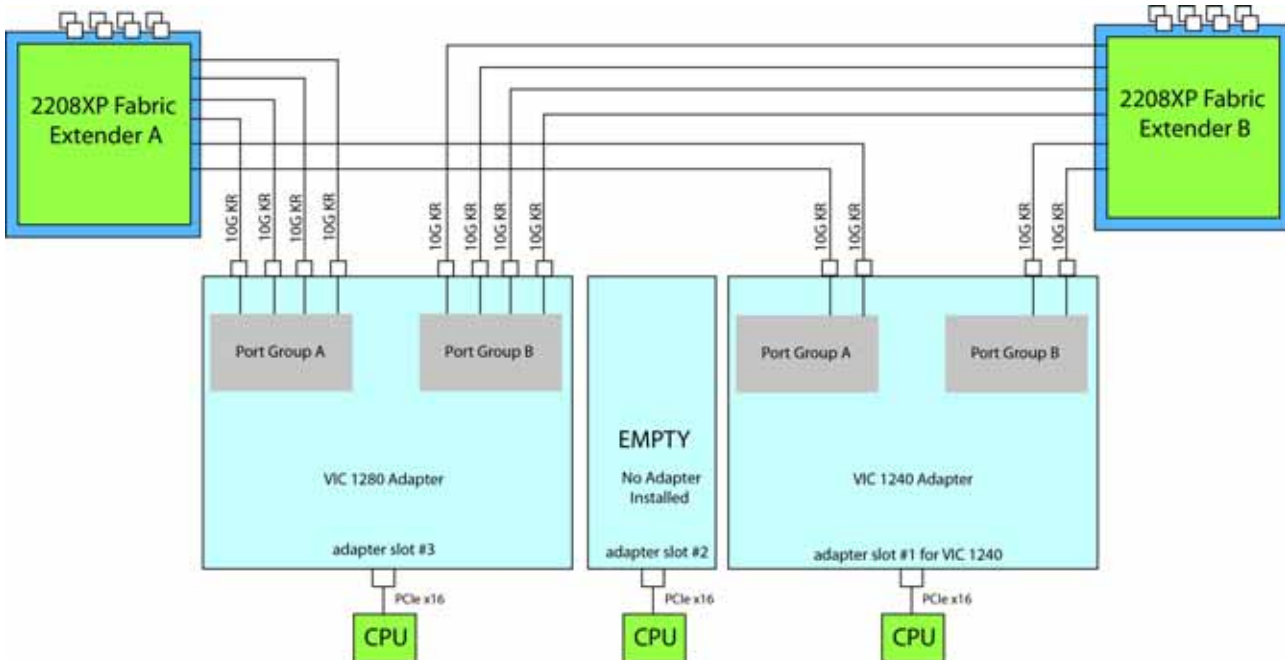

In *Figure 11*, two ports from the VIC 1240 adapter are channeled to 2208XP Fabric Extender A and two are channeled to 2208XP Fabric Extender B. The result is 20 Gb of bandwidth to each Fabric Extender.

Figure 11 VIC 1240 (adapter slots 2 and 3 empty)

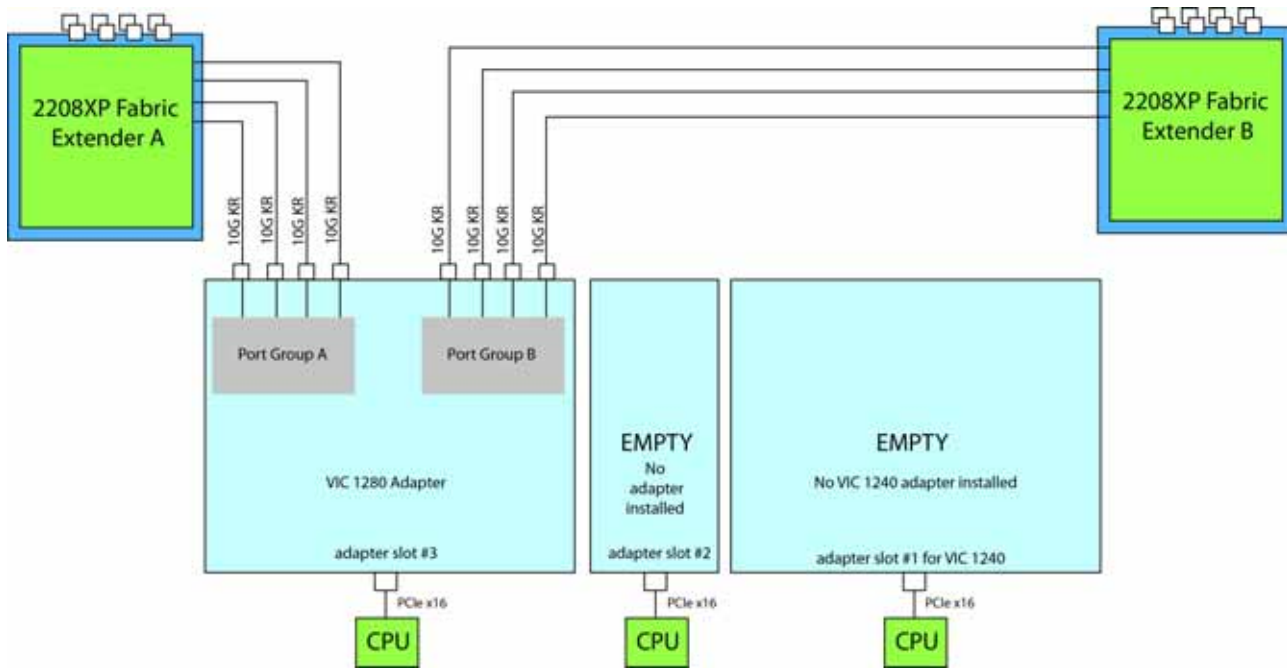

In *Figure 12*, two ports from the VIC 1240 are channeled to 2208XP Fabric Extender A and two are channeled to 2208XP Fabric Extender B. Adapter slot 2 is empty. The VIC 1280 installed in adapter slot 3 channels four ports to each of the Fabric Extenders. The result is 60 Gb of bandwidth to each Fabric Extender.

Figure 12 VIC 1240 and VIC 1280 (adapter slot 2 empty)

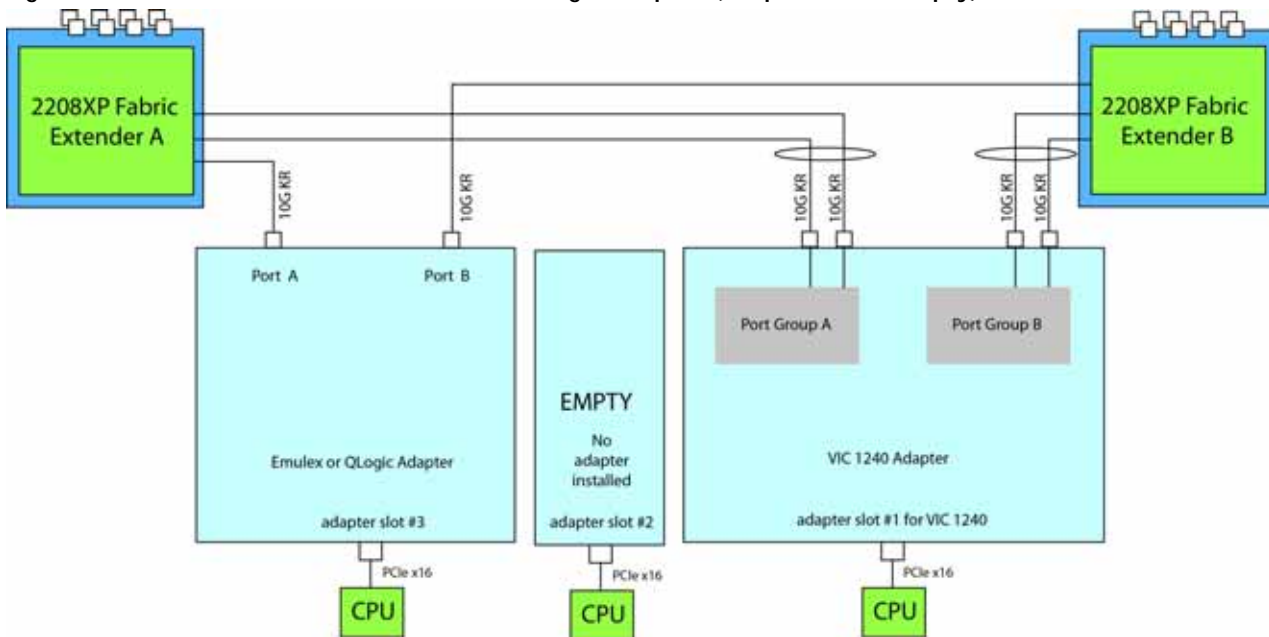

In *Figure 13*, four ports from the VIC 1280 are channeled to 2208XP Fabric Extender A and four are channeled to 2208XP Fabric Extender B. The VIC 1240 slot is empty and adapter slot 2 is empty. The result is 40 Gb of bandwidth to each Fabric Extender. This is not supported in 2-CPU configurations.

Figure 13 VIC 1280 (VIC 1240 slot empty and adapter slot 2 empty)

In *Figure 14*, two ports from the VIC 1240 are channeled to 2208XP Fabric Extender A and two are channeled to 2208XP Fabric Extender B. Adapter slot 2 is empty. The Emulex or QLogic adapter installed in adapter slot 3 also channels one port to each of the Fabric Extenders. The result is 30 Gb of bandwidth to each Fabric Extender.

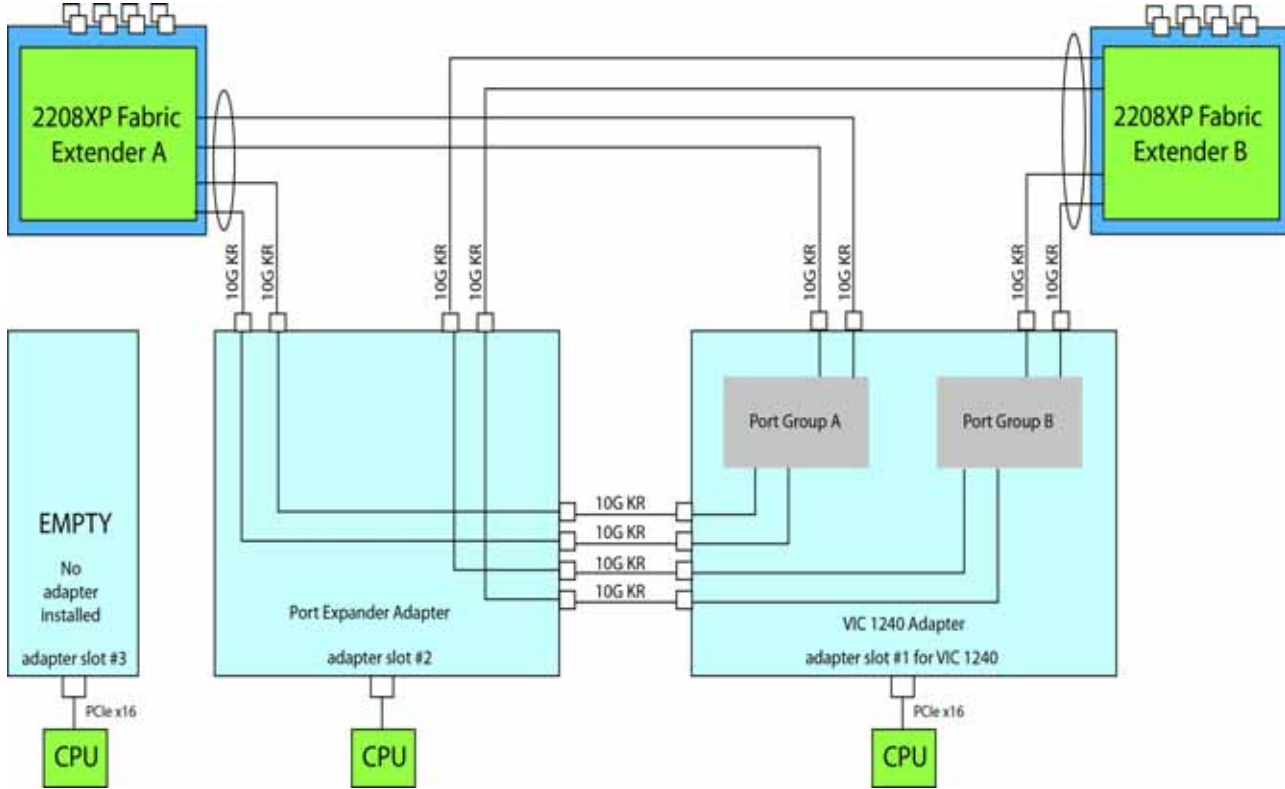

Figure 14 VIC 1240 and One Emulex or QLogic Adapter (adapter slot 2 empty)

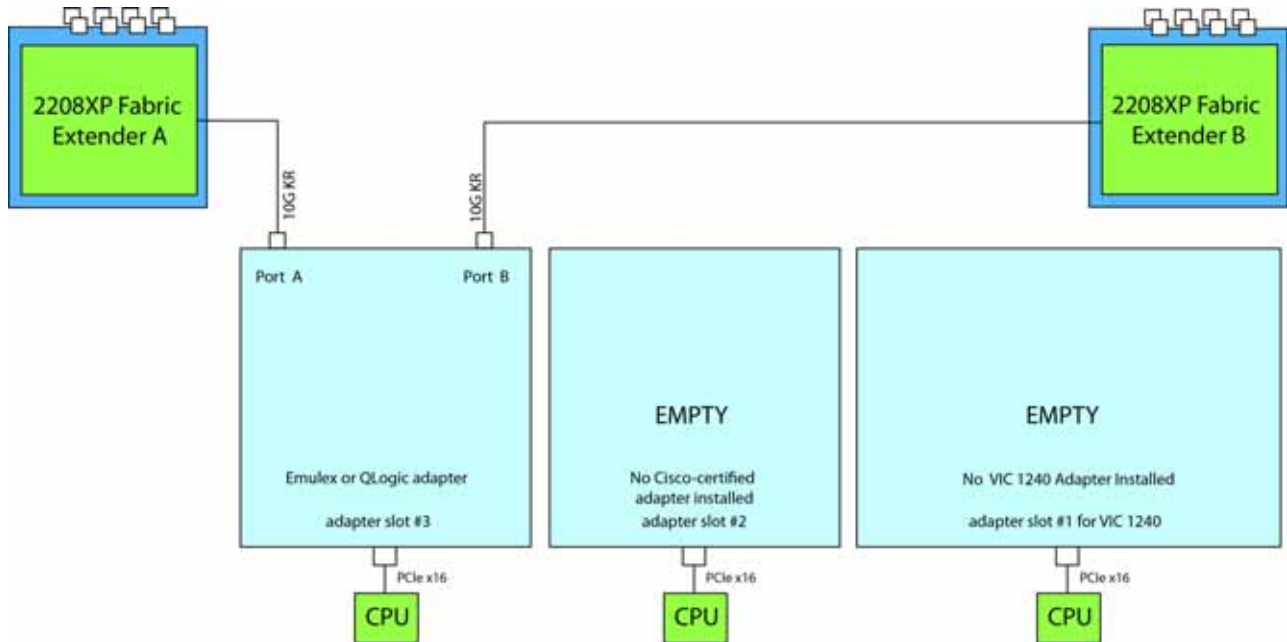

In *Figure 15*, two ports from the VIC 1240 are channeled to 2208XP Fabric Extender A and two are channeled to 2208XP Fabric Extender B. The Port Expander Card installed in adapter slot 2 acts as a pass-through device, channeling two ports to each of the Fabric Extenders. Adapter slot 3 is empty. The result is 40 Gb of bandwidth to each Fabric Extender.

Figure 15 VIC 1240 and Port Expander in Adapter Slot 2 (adapter slot 3 empty)

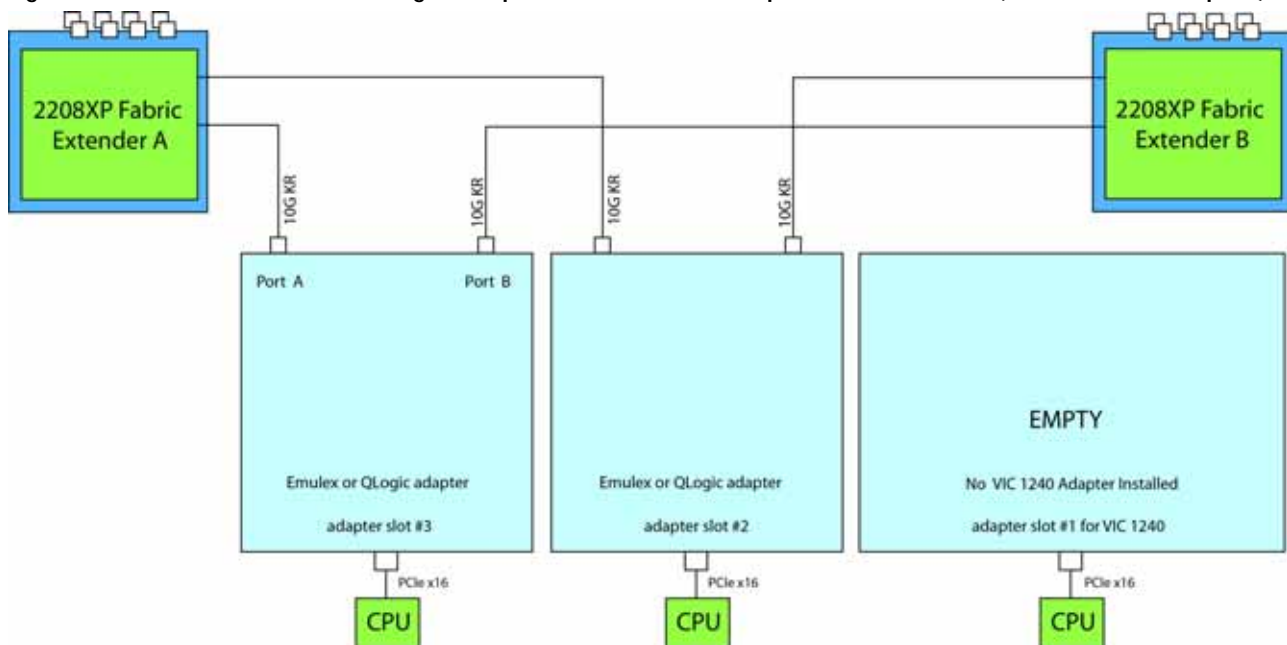

In *Figure 16*, there is no VIC 1240 installed. In this case, an Emulex or QLogic adapter is installed in adapter slot 3. Ports A and B of the adapter connect to the Fabric Extenders, providing 10 Gb per port.

Figure 16 One Emulex or QLogic Adapter Installed in Adapter Slot 3 (other two slots empty)

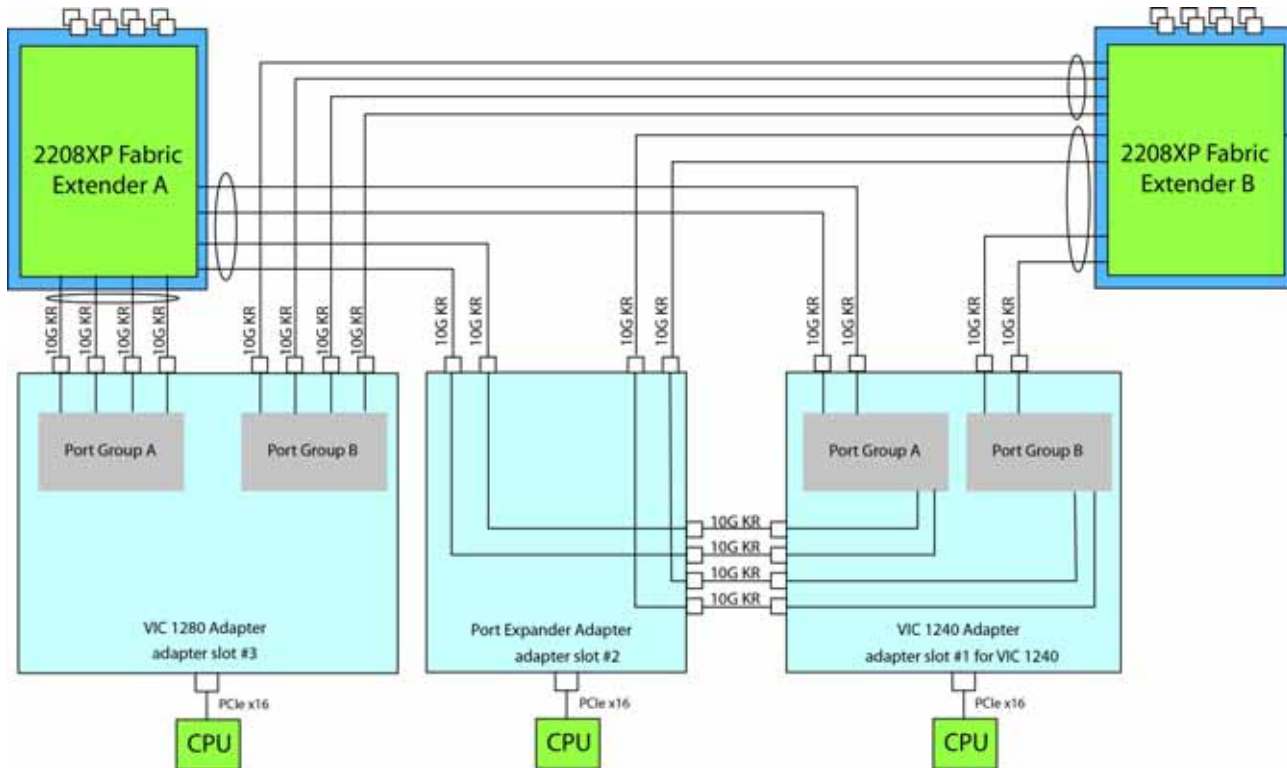

In *Figure 17*, there is no VIC 1240 installed. In this case, two Emulex or QLogic adapters are installed in adapter slots 2 and 3. Ports A and B of each adapter connect to the Fabric Extenders, providing 20 Gb to each Fabric Extender. This is not supported in 2-CPU configurations.

Figure 17 Two Emulex or QLogic Adapters Installed in Adapter Slots 2 and 3 (no VIC 1240 adapter)

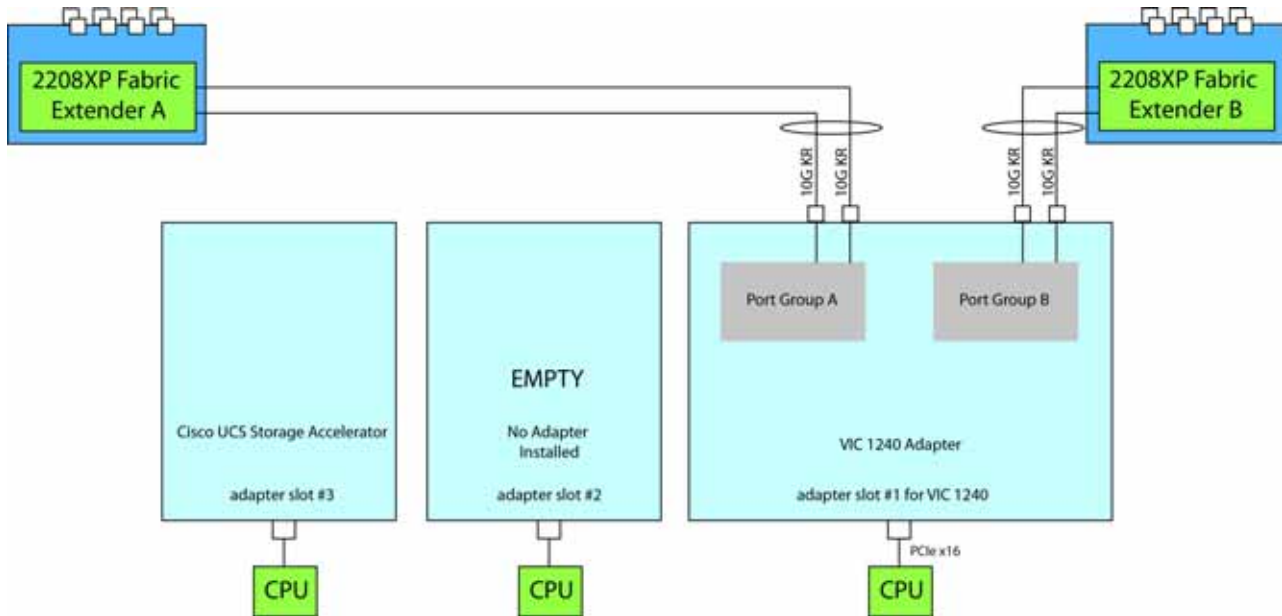

In *Figure 18*, two ports from the VIC 1240 are channeled to 2208XP Fabric Extender A and two are channeled to 2208XP Fabric Extender B. The Port Expander Card installed in adapter slot 2 acts as a pass-through device, channeling two ports to each of the Fabric Extenders. In addition, the VIC 1280 channels four ports to each Fabric Extender. The result is 80 Gb of bandwidth to each Fabric Extender.

In *Figure 19*, two ports from the VIC 1240 adapter are channeled to 2208XP Fabric Extender A and two are channeled to 2208XP Fabric Extender B. The result is 20 Gb of bandwidth to each Fabric Extender. A Cisco UCS Storage Accelerator adapter is installed in slot 2, but provides no network connectivity.

Figure 19 VIC 1240 (Cisco UCS Storage Accelerator in slot 3 and adapter slot 2 empty)

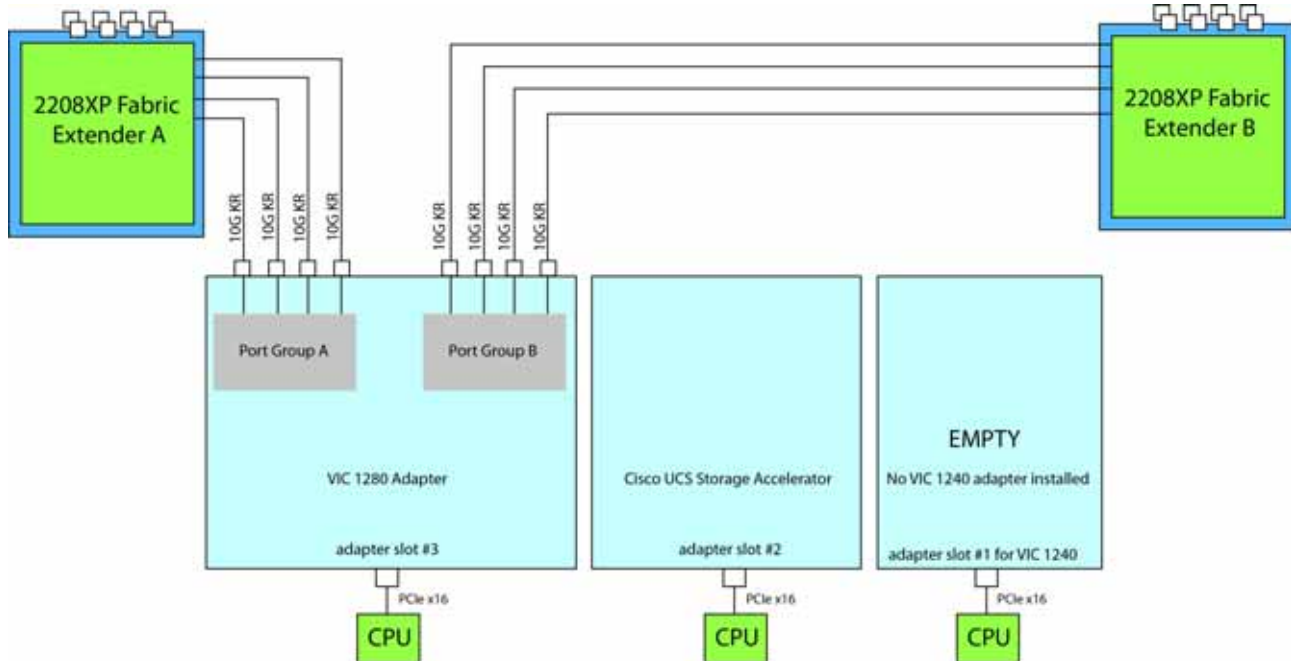

In *Figure 20*, two ports from the VIC 1240 adapter are channeled to 2208XP Fabric Extender A and two are channeled to 2208XP Fabric Extender B. The result is 20 Gb of bandwidth to each Fabric Extender. Two *identical* Cisco UCS Storage Accelerator adapters are installed in slots 2 and 3, but provide no network connectivity. This configuration is not supported for 2-CPU systems.

Figure 20 VIC 1240 (Cisco UCS Storage Accelerator in slots 2 and 3)

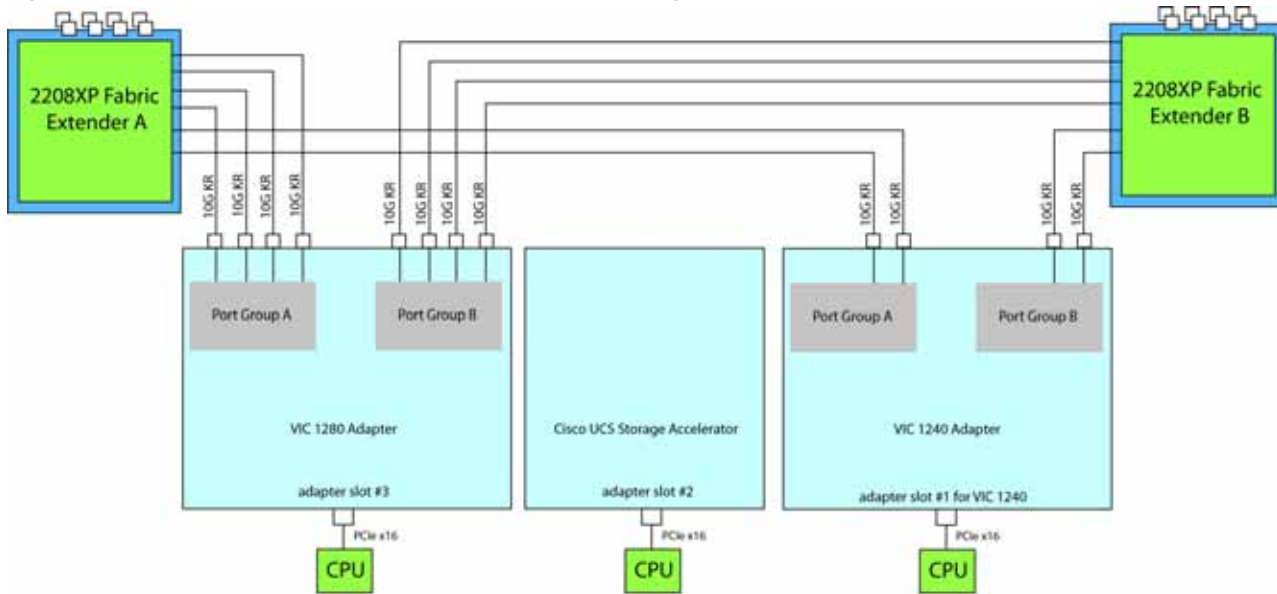

In *Figure 21*, four ports from the VIC 1280 are channeled to 2208XP Fabric Extender A and four are channeled to 2208XP Fabric Extender B. The VIC 1240 slot is empty and adapter slot 2 contains a Cisco UCS Storage Accelerator (which has no network connectivity). The result is 40 Gb of bandwidth to each Fabric Extender. This configuration is not supported for 2-CPU systems.

In *Figure 22*, two ports from the VIC 1240 adapter are channeled to 2208XP Fabric Extender A and two are channeled to 2208XP Fabric Extender B. The result is 20 Gb of bandwidth to each Fabric Extender. Four ports from the VIC 1280 are channeled to 2208XP Fabric Extender A and four are channeled to 2208XP Fabric Extender B. The result is 40 Gb of bandwidth to each Fabric Extender. The total bandwidth for the VIC 1240 and VIC 1280 together is 120 Gbs. Adapter slot 2 contains a Cisco UCS Storage Accelerator (which has no network connectivity). This configuration is not supported for 2-CPU systems.

Figure 38 VIC 1240 and Emulex or QLogic Adapter in Adapter Slot 3 (adapter slot 2 empty)

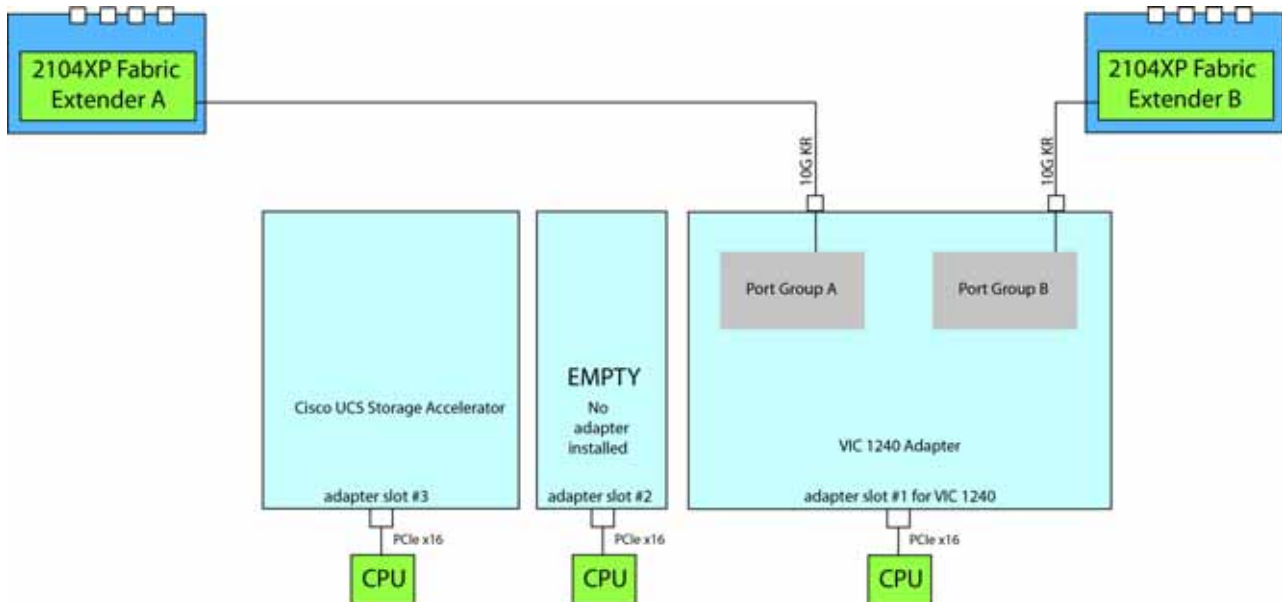

In *Figure 39*, there is no VIC 1240. In this case, an Emulex or QLogic adapter is installed in adapter slot 3. Ports A and B of the adapter card connect to the Fabric Extenders, providing 10 Gb per port.

Figure 39 One Emulex or QLogic Adapter (VIC 1240 slot and adapter slot 2 are empty)

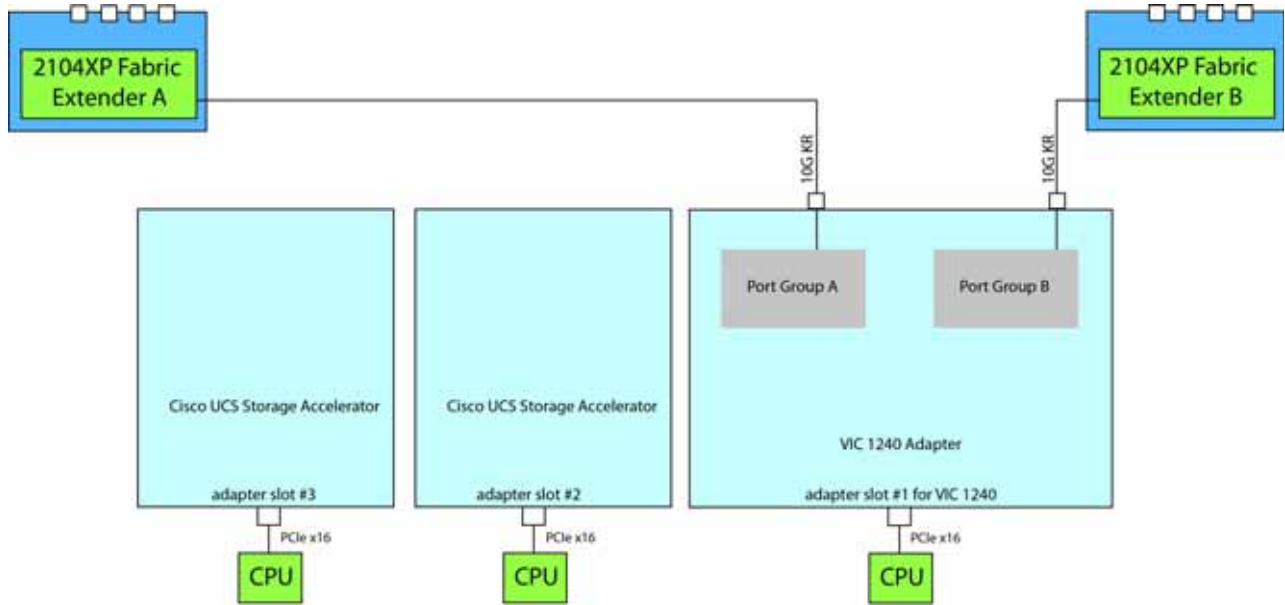

In *Figure 40*, one port from the VIC 1240 is channeled to 2104XP Fabric Extender A and one is channeled to 2104XP Fabric Extender B. The result is 10 Gb of bandwidth to each Fabric Extender. A Cisco UCS Storage Accelerator (which provides no network connectivity) is installed in slot 2.

Figure 40 VIC 1240 (Storage Accelerator in adapter slot 3 and adapter slot 2 empty)

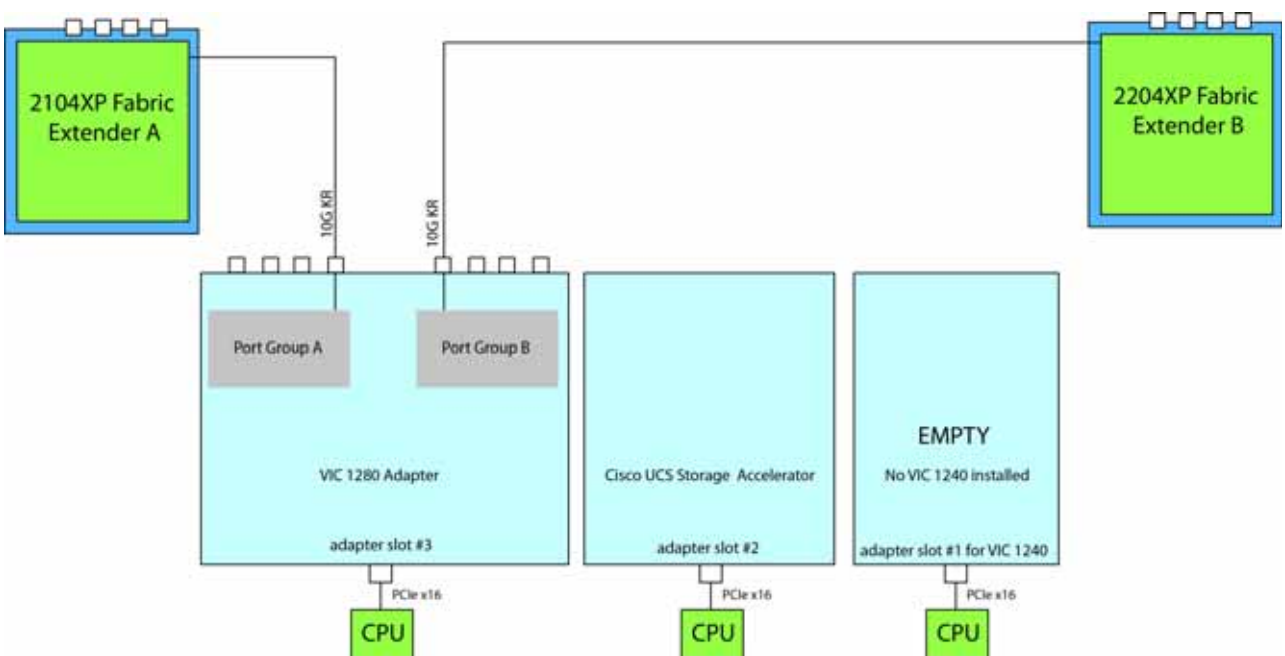

In *Figure 41*, one port from the VIC 1240 is channeled to 2104XP Fabric Extender A and one is channeled to 2104XP Fabric Extender B. The result is 10 Gb of bandwidth to each Fabric Extender. Cisco UCS Storage Accelerators (which provide no network connectivity) are installed in slots 2 and 3. This configuration is not supported for 2-CPU systems.

Figure 41 VIC 1240 (Storage Accelerators in adapter slots 2 and 3)

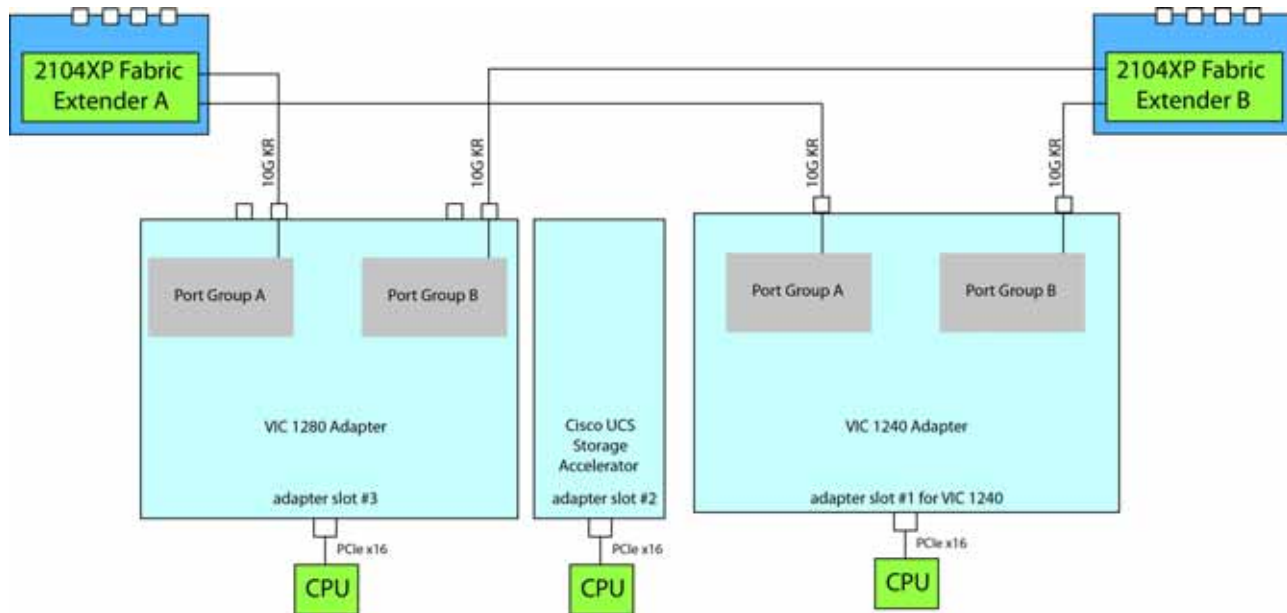

In *Figure 42*, one port from the VIC 1280 is channeled to 2208XP Fabric Extender A and one is channeled to 2208XP Fabric Extender B. The VIC 1240 slot is empty and adapter slot 2 contains a Cisco UCS Storage Accelerator (which has no network connectivity). The result is 10 Gb of bandwidth to each Fabric Extender. This configuration is not supported for 2-CPU systems.

Figure 42 VIC 1280 (VIC 1240 slot empty and Cisco UCS Storage Accelerator in adapter slot 2)

In *Figure 43*, one port from the VIC 1240 is channeled to 2104XP Fabric Extender A and one is channeled to 2104XP Fabric Extender B. The VIC 1280 installed in adapter slot 3 channels one port to each of the Fabric Extenders. Adapter slot 2 contains a Cisco UCS Storage Accelerator (which has no network connectivity). This configuration is not supported for 2-CPU systems. The result is 20 Gb of bandwidth to each Fabric Extender.
